SNAPConnect[®] Receptacle Wiring Tester with GFCI Test Button

3-in-1 TESTER

The SNAPConnect[®] Circuit Tester is an exclusive three-function tool. Use it to test the wiring of installed receptacles, roughed in SNAPConnect receptacle terminals and to ensure that GFCI receptacles are wired correctly and functioning as intended. Easy to read lights on the tester housing immediately report the state of the circuit. The label clearly interprets the readings, indicating if the wiring connections have been made properly and helping to diagnose miswiring conditions.
